A Computer Science and AI graduate from the University of Bath (2:1 69%) with 15 months of industry experience as an AI Data & Software Engineering intern at an award-winning medical device startup. Experience designing end-to-end ML pipelines, conducting exploratory data analysis, and developing internal tools that accelerated team-wide experimentation. Eager to apply and expand these skills in a high-impact AI/ML engineering or research role.

TECHNICAL SKILLS

Languages: Python, SQL

ML & Data Science: PyTorch, TensorFlow, scikit-learn, pandas, NumPy

Infrastructure: Docker, Linux/Ubuntu, Git

EXPERIENCE

AI Data & Software Engineering Intern July 2023 - September 2025 (15 mos total)

Afon Technology Ltd. - Medical Device Startup (Award-Winning)

- Performance during the initial 2-month summer internship led to the offer of the 13-month industrial placement.
 - Developed a modular, end-to-end machine learning pipeline investigating deep learning approaches for blood glucose prediction from wearable sensor data collected during clinical trials, enabling rapid, reproducible experimentation across the research team.
 - Iteratively designed and maintained a suite of internal Python tools to support data analysis.
 - Conducted exploratory data analysis to identify high-quality data regions for model training, and independently diagnosed firmware issues from device data, directly contributing to the discovery and resolution of firmware bugs.
 - Regularly presented software functionality, data analysis findings, and research progress to both technical and non-technical stakeholders, including end users of the tools.
-

EDUCATION

BSc (Hons) Computer Science with Artificial Intelligence - 2:1 (69%)

University of Bath - With Industrial Placement Year 2022 - 2026

- Dissertation: A Comparative Analysis of Intrinsically Motivated Deep Reinforcement Learning Methods in Robotic Arm Manipulation Tasks.
 - Implemented Soft Actor-Critic with Hindsight Experience Replay (SAC+HER) from scratch in Python, integrating intrinsic motivation modules (ICM and RND) to tackle sparse-reward environments.
 - Benchmarked on sample efficiency, task success rate, and trajectory smoothness within MuJoCo manipulation environments on the university compute cluster.
- Relevant modules: Reinforcement Learning, Computer Vision, Natural Language Processing, Entrepreneurship.

Monmouth School for Boys 2015 - 2022

A levels: Mathematics (A), Further Mathematics (B), Physics (A), Computer Science (A)

GCSEs: Seven grade 9s, three grade 8s
